# INTERNATIONAL CONFERENCE ON DATA AND DIGITAL GOVERNANCE 2024

19 – 22 October 2024  
Shanghai and Deqing

**Lang Loum**  
**Director General**  
Ministry of Communications & Digital Economy  
The Gambia

**United Nations**

Department of  
Economic and  
Social Affairs

## Background

- Population: ~2.4 million
- Internet Penetration:** ~51.0 %
- Mobile Penetration:** ~164%
- Government initiatives on digital economy (e.g., National Development Plan, Digital Economy Master Plan, ICT4D Policy etc.)
- 1 fixed, and 4 GSM companies, 5<sup>th</sup> one licensed
- Gambia's Digital Economy is evolving that requires a mix of supply side policies and investment to boost access and affordability and Digital skills development.

# 1. What are two critical lessons learned in implementing data/digital transformation strategy in your country: what works and what doesn't?

## • What Works

- **Investment in Infrastructure is Key to Success**
- **E-Government Platforms:** The implementation of key services, including **online tax payments**, **integrated Financial Managements** has enhanced efficiency and transparency.
- **Broadband and Submarine Cables:** Investments in the **ACE submarine cable** and national broadband expansion have significantly improved internet connectivity, supporting economic growth and digital service penetration.

## • What Doesn't Work

- **Interoperability Issues:** The lack of seamless integration between **government digital platforms** has hindered cross-platform data sharing, leading to inefficiencies.
- **Cybersecurity Gaps:** Although frameworks are in place, inadequate **cybersecurity infrastructure** leaves government and business data vulnerable to threats, undermining trust in digital systems.

## 2. What are two challenges that you face, and would like to learn from other countries?

- **1. Infrastructure Deficit**
  - Limited access to **reliable broadband** in rural areas continues to hamper widespread adoption of e-government services.
  - Underdeveloped **data centers** and limited cloud infrastructure create bottlenecks for digital transformation.
- **2. Underdeveloped digital payments platform**
- **3. Inadequate Digital Skills**

### Challenges We Want to Learn from Other Countries

#### 1. Overcoming Digital Divide

- How have countries successfully bridged the **urban-rural digital divide**, ensuring equitable access to digital services for all citizens?

#### 2. Interoperability and Integration Challenges

- **3. What cybersecurity strategies** have proven successful in countries with similar challenges, especially in developing **national-level** security protocols?

### 3. Suggest one recommendation for further discussion in UN forums; how can the UN and the global community better support countries in advancing effective data/digital governance strategies?

#### 1. Priority for Infrastructure Development

- **Broadband Access:** The UN should prioritize **regional infrastructure** initiatives to expand broadband coverage and **data center capacity** in West Africa.
- **Cloud Computing:** Support the creation of **cloud infrastructure** to enhance government data storage and processing capabilities.

#### 2. Capacity Building for Digital Governance

- Focus on **training and knowledge transfer** to help countries develop robust **digital governance frameworks**.
- Facilitate collaboration on emerging technologies, such as **AI**, machine learning and **big data**, and their governance implications for sustainable development.

#### • Conclusion

- **Digital transformation** offers immense potential to drive sustainable and inclusive growth.
- However, challenges like **infrastructure gaps** and **capacity deficits** must be addressed through **global cooperation**, particularly within the **West African** region.
- The UN can play a pivotal role in supporting countries by providing **infrastructure development** and **capacity-building** initiatives, helping to ensure sustainable digital futures. Continue to encourage south-south collaboration initiative such as the a2i (myGov)
