Legal and Regulatory on ICT and digital economy

Law support Digital and ICT : the Law on ICT (2017), Law on Prevention and Combating Cyber Crime (2015), Law on Payment System (2017) and the Law on Electronic Signatures (2018), Law on advance Technology (2020) , Law on Telecommunications (2020), Law on Electronic Transactions (2022), Decree on Digital Government (2022), and 2024 Draft digital Government Strategies, AI strategies, Cybersecurity Strategy and Law.

Challenges on digital governance

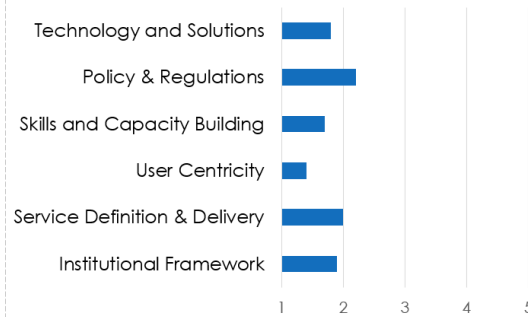

Country-Level Assessment¹

Key Insights

- Lao PDR is currently **digitally nascent** at an overall country-level
- The country is making good progress and is **moving towards becoming digital emerging** through:
 - Enactment of multiple legislations and laws related to digital governance
 - Digital transformation initiatives such as National Digital Economy Vision (2021-2040), five-year National Digital Economy Plan, and National ICT Policy 2015-2025
- However, the country falls behind in terms of:
 - Affordability and quality of internet services
 - ICT/Digital skills workforce and educational ecosystem
 - Lack of e-participation and feedback mechanism

DMA Pillars

¹: Lao PDR's digital maturity across 19 ministries and 18 provinces

•Data Availability and Quality:

- Limited access to high-quality, relevant data
- Challenges in data standardization and integration across different sectors.
- Language and local content

•Skill Gaps and Capacity Constraints:

- Shortage of expertise and trained personnel in government agencies.
- The need for continuous learning and skill development among public servants.

•Infrastructure and Resource Limitations:

- Insufficient technological infrastructure to support
- Financial constraints limiting the adoption of digital technologies.

•Public Awareness and Trust:

??????????

"Transform to digital government that can connect government, business and people and to be driver of economic-social Lao PDR"

1. What are two critical lessons learned in implementing data/digital transformation strategy in your country: what works and what doesn't?

What Works:

1. A **National Executive Committee** for Digital Transformation has been appointed in the Lao PDR, with the Prime Minister of the Lao PDR serving as the chairperson. This committee facilitates cooperation between the ministries of the Lao PDR in developing a digital government.
2. Laos has made meaningful progress in rolling **out digital public services through e-Government platforms**. Services like online business registration, tax filing, and health services have improved efficiency and reduced bureaucratic hurdles. These initiatives help streamline interactions between the government and citizens, making processes more transparent and reducing corruption.
3. The Laos government has **leveraged partnerships with international organizations** and neighboring countries to support its digital transformation efforts. Organizations like the World Bank, the United Nations, and regional partners have provided funding, technical expertise, and infrastructure development to help Laos build its digital ecosystem.

What works for us ?

1. Pain Points Driven – User-Centric Approach Focus on Solving Real Problems:

- Example: E-Office as a Hero Product
- E-Office: A government software designed for **document tracking and management** across inter-governmental agencies.
- Key benefits:
 - Enhances **efficiency** by tracking documents in real-time.
 - **Reduces the risk** of lost or misplaced documents

What works for us ?

2. Having local developers' part to be part of digital governance project

- **Understanding Local Context:**
Local developers are familiar with the unique challenges and requirements, and know how to navigate within local context
- **Building Stronger Relationships:**
Local developers foster **stronger connections** with key stakeholders, ensuring smoother project execution.
- **Faster Response and Extended Support:**
Having developers on the ground leads to quicker response times, ensuring **longer-term service** and support.
- **Cost Efficiency:**
Reduced travel and outsourcing costs by leveraging **local talent**.

2. What are two challenges that you face, and would like to learn from other countries?

Funding Challenges

- **External Funding:**
There is a **mismatch** between the real needs of our e-government initiatives and the **available funding** from external sources.
- **Internal Funding:**
 - In Laos, there is **no dedicated budget** for the **maintenance** of e-government systems.
 - This makes it **impossible to apply for state funding** to support ongoing maintenance, leading to unsustainable systems.

Interoperability Issues

- **Fragmented Systems:**
As a least developed countries, different ministries and agencies in Laos often receive **donor funds, grants, and aid** to develop their own separate systems.
- **Result:**
These isolated systems hinder **interoperability** across government agencies, creating inefficiencies in communication and collaboration.

Social Affairs

3. Suggest one recommendation for further discussion in UN forums; how can the UN and the global community better support countries in advancing effective data/digital governance strategies?

- The UN could create online platforms that connect countries, allowing them to **share best practices, case studies, and experiences related to data and digital governance**. This would encourage collaboration and provide countries like Laos access to valuable insights from others who have successfully implemented governance strategies.
- The UN can work with member states **to develop training programs tailored to the specific needs of countries at different stages of digital transformation**. These programs could focus on key areas such as data protection, digital literacy, and cybersecurity, equipping local stakeholders with the necessary skills to implement effective governance frameworks.
- The UN should encourage **partnerships between developed and developing countries, enabling knowledge transfer and resource sharing**. Collaborations can be established with international organizations, NGOs, and the private sector to provide technical assistance and financial support for capacity building initiatives in data governance.

Social Affairs

How can the UN and the global community better support countries in advancing effective data/digital governance strategies?

Resource Mobilization for Advancing Digital Governance

- Funding Support
- Human Resource Development and Capacity Building
- Investment Efficiency Guidelines to prevent duplicate investment
